Condification from W68E, 084W, A95P, K97C, S168E, R180Y, N226C or Y277D.
CC Also included the E. coli appA gene ADA19445 and having amino acids
CC derived from it) or its mutant sequence ADA1945.
CC containing foodstuff by contacting the phytate-containing foodstuff by contacting the phytase containing foodstuff by contacting the phytase in the phytate in the phytate containing foodstuff), a method to produce an animal feed containing a containing foodstuff), a method to produce an animal feed containing a comprising culturing the plant cell, plant part or plant under conditions where the nucleotide sequence is expressed and converting the plant cells, plants or plants or plant into a composition for animal feed composition for animal (comprising the plant seeds, plant cells, plant parts or plants in admixture with a phytate-containing comprising the plant seeds, plant cells, plant parts or plants in admixture with a phytate-containing comprising the plant seeds, plant cells, plant parts or plants or plants or animal scomprising the plant seeds, plant cells, plant parts or plants or plants or animal the plant seeds, plant cells, plant parts or plants or human or an animal able to benefit from digestive enhancement by the activity of an exogenous phytase enzymes comprising administering to the human or animal the plant seed, plant cells, plant parts or plants of a transgenic plant which is modified to comprising a heterologous nucleic acid sequence encoding a polypeptide comprising a heterologous nucleic acid sequence encoding a polypeptide nutritional value of phytate-containing foodstuff, in the production of animal feed and for enhancing digestion in humans and animals. The containing the sequence represents E. coli K12 mutant phytase.

CC sequence represents E. coli K12 mutant phytase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Short JM,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coil APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)

Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coll APPA phytase codding sequence. (Updated on 12-SEP-2003 to standardise OS field)

Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coil APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Transgenic animal; salivary protein; phytase; phosphorus; animal growth; environmental pollution; pig.

                                                                                                                                                                                                               The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                      Transgenic non-human animal for gastrointestinal tract specific expression of a protein, preferably phytase, comprises a nucleic sequence including a heterologous transgene construct encoding the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                        The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                         Transgenic non-human animal for gastrointestinal tract specific expression of a protein, preferably phytase, comprises a nucleic sequence including a heterologous transgene construct encoding

Low phytase production levels result in phytate in the diet lexcreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coil APPA phytase coding sequence. (Upo on 12-SEP-2003 to standardise OS field)

Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                 The patent discloses recombinant bacterial phytase from Escherichia coli CK K12 apph phytase. The enzyme has phytase activity and improved thermal CC tolerance when compared with wild-type phytase. It has improved protease stability at low pH. The recombinant phytase is useful for improving the mutritional value of phytate-containing foodstuffs and subsequently comproving the growth performance of an organism that consumes it, in treating animal digestive systems, in feed treatment processes and for in vitro purposes related to research, discovery and development. They are also used for generating recombinant digestive system life forms, for producing or manufacturing alcoholic and non-alcoholic drinks based on the use of moulds, grains and/or plants, in biopulping and bio-bleaching where a reduction in the use of environmentally harmful chemicals that are traditionally used in the pulp and paper industry is desired and in the reduction or possible elimination of the need for mineral supplements, enzymes or therapeutic drugs for animals from the daily feed thus increasing the amount calories and nutrients present in the feed. The present sequence is E. coli apph phytase wild type protein

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
